

Astha Chauhan

Computer Science Engineer | Applied AI

Dubai, UAE • asthachauhan81@gmail.com • +971569894048

TECHNICAL SKILLS

AI & Automation	Generative AI, LLMs, Prompt Engineering, AI-driven Workflows, NLP, Predictive Modeling, Model Evaluation
Programming & Data	Python, SQL, Pandas, NumPy, Scikit-learn, TensorFlow, Excel, Power BI
Business & Analytics	Market Analysis, Financial Data Interpretation, Data Pipelines, ESG Analytics, Blockchain Applications
Tools & Platforms	HubSpot, Backend APIs, Web Development Stack

PROFESSIONAL SUMMARY

Computer Science Engineer passionate about exploring emerging technologies and turning complex problems into meaningful solutions. With experience across AI, data, and business strategy, I enjoy building end-to-end solutions, uncovering insights from data, and bringing ambitious ideas to life. I'm particularly excited by opportunities at the intersection of technology, sustainability, and market intelligence, where innovation can create real-world impact.

EDUCATION

Bachelor's in Computer Science

Manipal Academy of Higher Education | 2024

Focused on AI, Machine Learning, Data Structures, Blockchain and Data Analytics, applied through research internships, hackathons and startup incubation.

PROFESSIONAL EXPERIENCE

Generative AI Engineer | Promptus AI

Oct 2025 – Present

- Built and tested generative AI workflows through hands-on prompt experimentation, improving output consistency and automating repetitive work.
- Developed AI-driven engagement tools that linked model behavior to real product and business needs.

Executive Assistant to CEO | Be Wise

Jul 2025 – Sep 2025

- Supported the CEO across investor, client and strategic priorities in a fast-moving environment, taking ownership of tasks with little supervision.
- Researched markets and competitors to help shape positioning and revenue growth decisions.
- Analyzed platform performance data to spot inefficiencies and turned the findings into practical recommendations.

Business Development Executive | SusoTech

Jan 2025 – Jun 2025

- Researched and analyzed financial and operational datasets, building data pipelines that turned findings into clear, usable business insight.
- Investigated backend architectures and API designs for data-heavy platforms, prototyping processing components with a focus on reliability.
- Researched blockchain approaches and built a working prototype to validate a secure, end-to-end transaction lifecycle.

Machine Learning Engineer | Lion Charge Mar 2024 – Oct 2024

- Designed and deployed predictive models for market forecasting, turning data patterns into signals the team could plan around.
- Analyzed complex datasets to connect model outputs with business and operational decisions.
- Improved model performance through repeated rounds of feature engineering, testing and optimization.

Web Developer | iCodejr Jul 2023 – Sep 2023

- Built responsive web applications with a focus on performance, usability and reliable delivery.
- Turned product requirements into maintainable front-end features within agile development cycles.

Broker Associate | Property Exchange Mar 2023 – May 2023

- Studied pricing trends and local market conditions to spot investment opportunities and guide client strategy.
- Set up reporting workflows that gave better visibility of leads and pipeline and improved conversions.

Research Intern | Manipal University Jul 2022 – Dec 2022

- Developed machine learning models on the NASA Defect Dataset to improve defect prediction and software reliability analysis.
- Built evaluation frameworks to benchmark different algorithms and support evidence-based model selection.

Web Developer | Hope Digital Jun 2021 – Dec 2021

- Delivered web applications in a startup setting, balancing speed, functionality and scalability.
- Worked with cross-functional teams to take product ideas through to deployed digital experiences.

PROJECTS & INNOVATION

RAHI

Expo 2020 Incubator – 2025

Built a quantum-inspired, AI-powered mobility platform with real-time route optimization, adaptive heat-zone detection, intelligent ride matching and a gamified trust layer with carbon credit incentives.

TRACE

DEWA Clean Tech Hackathon – 2026

Designed an AI-enabled ESG reporting platform that turns sustainability data into structured metrics, reporting workflows and decision-focused dashboards. Named National Finalist (UAE) at Red Bull Basement 2026.

AI-Quantum Inspired Water Optimization System

NYUAD Quantum Hackathon – 2024

Developed a computational model to improve water allocation efficiency and support better resource planning.

Verdex

Sevan Startup Summit – 2024

Designed a circular economy model for battery reuse, tying lifecycle optimization to sustainability and long-term infrastructure value.

Caliber.ai

Sheraa Incubator – 2025

Shaped a scalable product concept for personalized learning pathways by translating user needs into clear product and engineering requirements.

LEADERSHIP

Google Developer Student Clubs (GDSC)

Led student-driven technical initiatives, collaborative learning and developer community engagement.

Sevan Startup Summit

Led a team and took ownership of execution and delivery under tight timelines.

Expo 2020 Incubator

Participated in the incubator programme while building RAHI.

ADDITIONAL — SELECTED FOCUS AREAS

- AI systems for prediction, automation and decision support
- Generative AI, prompt engineering and agentic workflows
- FinTech analytics and market intelligence
- Sustainability, ESG reporting and systems-level product design
